

The latest battery system

moldable LiPo batteries | USB charging port | charger

VINCENTpower USB

made in germany

VINCENTpower USB

Battery system for medium and long arm stumps

VINCENTaccu flex

The flexible rechargeable batteries are flat throughout and can be **bent lengthways and widthways over their entire length**. Thus, they can be optimally adapted to the anatomical shape of the shaft.

The cells are always **installed in pairs** and are available in **two sizes**, which differ in their capacity: Two small cells have a capacity of 420mAh, two large cells have a capacity of 1290mAh. The **number of cells can be doubled** to reach capacities of 840mAh or 2580mAh.

	capacity	dimensions [mm] [in]	bending radius lengthways [mm] [in]	bending radius widthways [mm] [in]
VINCENTaccu flex420 nano	420 mAh			
VINCENTaccu flex1290	1290 mAh			

VINCENTcharger USB

The USB charger included in the package meets the strict requirements of **medical technology** with **EN60601 approval** and guarantees an **optimal user safety**.

VINCENTchargingport USB

The USB-C charging port *VINCENTcharging port* serves as an **on/off switch** for the prosthesis. The **USB-C interface** allows you to **conveniently charge** the flexible batteries **while on the move**.

Due to the flat shape and the curved surface, the charging port can be easily integrated into the shape of the shaft. Alternatively, it can be installed together with a mounting frame (information on our website).
